

MASTER CHASSIS PARTS LIST

Cadillac and La Salle Motor Cars

This Parts List is effective January 2, 1934, and
supersedes all previous lists. Parts and prices
are subject to change or removal without notice.

INTRODUCTION

Models Included

The Fifth Edition Master Chassis Parts List includes all active parts used on Cadillac V-8, V-12, V-16 and La Salle V-8 Motor Cars. It supersedes all previous Parts Lists for these models.

Method of Listing

The Descriptive section is divided into 20 main Groups arranged in Alphabetical order. This classification corresponds to the Contract Maintenance Operation Schedule and the Shop Manual and is as follows:

1.0000	Front axle	11.0000	Frame
2.0000	Rear axle	12.0000	Gasoline system
3.0000	Body fittings	13.0000	Hood
4.0000	Brakes	14.0000	Lighting
5.0000	Clutch	17.0000	Springs
6.0000	Cooling system	18.0000	Steering gear
7.0000	Electrical	19.0000	Tire carrier
8.0000	Engine	20.0000	Transmission
9.0000	Exhaust system	22.0000	Wheels
10.0000	Fenders, running boards, dust shields	25.0000	Standard Parts

The basis of the order of listing is a Group Number printed in the first column at the left on each page. All parts having the same name and function comprise a Group and have the same Group Number. The digits in front of the decimal point in the group number correspond to the 20 main Groups. The digits following the decimal point identify the group.

For example, the group number of all front axle parts have the digit "1" before the decimal point. The group number of all knuckle bolts, regardless of model, has the digits 0195 following the decimal point. All knuckle bolts will be found listed together under this same group number (1.0195).

The illustrations furnish the principal means of finding the group number of any desired part. Part numbers do not appear on illustrations. The Alphabetical Index following the Description section of the list is also useful to locate group numbers, when the correct name of the part is known.

The symbols indicating (●) Fast Moving Parts, (■) Medium Moving Parts, and (▲) Slow Moving Parts are shown to assist distributors and dealers in maintaining properly balanced stocks, and are based on the factory's national disbursements. They should be used by distributors and dealers only as a guide in considering the proper parts to be stocked. Local demand and good judgment must always be used in determining the actual parts to be stocked.

Numerical Index

The Numerical Part Number and Price List follows the Descriptive section of the book. This list shows the Group Number of each Part Number. If the Part Number is known, reference can be made to the Descriptive section for the use and location of the part.

Standard Parts Group

This group includes such parts as, nuts, lock washers, plain washers, cotter pins and other parts which come under the classification of standard commercial parts. Many of these parts are omitted from the listings in the Descriptive groups and placed in the Standard Parts group for convenient reference and to facilitate the ordering of this class of material.

Instructions for Ordering

Forms and routine procedure for ordering parts are described in detail in the Parts Accessory Merchandising Manual and in Chapter III of the Cadillac Service Manual. The regular use of the Monthly Order Pad, listing fast-moving parts by part number, is strongly urged to insure and adequate stock and to reduce emergency orders to the minimum.

When ordering parts not listed on the Monthly Fast-Moving Order Pad, each part must be specified by part number, group number and name as listed herein except in telegraphic orders, when the coded part number only may be used. Orders for special material not listed in Master Parts Lists should specify engine number of car for which they are ordered in addition to complete description of parts.

Parts Classification

The Factory Parts Stockroom is separated into four divisions. To facilitate the handling of shipments, parts in these four divisions should be ordered on separate sheets. The classifications and marks by which the divisions are designated in this Master Parts List are as follows:

- (*)-Crated Parts
 - General Chassis Parts
 - Body (Fisher-Fleetwood) Parts (see Master Body Parts List)
 - Accessories

Right and Left-Hand Parts

Right and left-hand parts are so designated from the driver's position when seated in the car. "L.H.D." indicates left hand steering and "R.H.D." right hand steering cars.

Parts used exclusively on Right Hand steering cars are listed in a separate section at the end of the main or descriptive section. When ordering parts for "R.H.D." cars it will be necessary to determine the group number of the similar "L.H.D." parts and then turn to the section devoted to "R.H.D." parts for the correct part number.

Body Parts

Group "3" in the Descriptive section covers only body fittings which are not part of the body as supplied by Fisher. Fisher and Fleetwood parts are listed in the Master Body Parts List.

Unit Numbers

When changes have been made in design during production of a model, the correct part number cannot be determined positively from the engine number. Beginning with Series 314, Unit Numbers have been assigned to the main assemblies such as axle, engine, transmission, etc. Changes in design starting with Series 314 are recorded by these numbers and are so described in this Parts List.

Because of the necessity of referring to these numbers many times when the car is not readily available for inspection, a Unit Number Record should be established and maintained by every Parts Department. This record which is described in detail in the Cadillac Service Manual, should be started when the car is sold.

The locations of the various Unit Numbers are given below:

ENGINE UNIT NUMBER	On top side of left rear crankcase support arm. 355D, 370D, 452D, on right rear crankcase support arm.
JOB AND BODY UNIT NUMBER	On metal plate on front of dash or on hood ledge.
CHASSIS (FRAME) UNIT NUMBER	Left side bar directly over the steering sector. (On the first 1800 Series 303 La Salles the number is stamped on the upper surface of right side bar above the rear crankcase support just inside of the cowl, -later changed to the upper surface on the right hand bar about eight inches ahead of the cowl. The location of the number was then changed from the right side bar to the left side bar directly over steering sector). For 345C-355C-370C-452C on left front engine support bracket. On 355D-370D and 452D, stamped on top of right side bar in front of first body bracket (dash to frame)
TRANSMISSION UNIT NUMBER	On left hand side of transmission case on edge of flange attachment of crankcase. (On Series 303 La Salles before engine No. 212001 number is stamped on upper surface of boss to which clutch and brake pedals are attached.) No number used on "D" series.
FRONT AXLE UNIT NUMBER	On upper surface of axle I-beam at right hand end just above the steering stop screw. On late Series 340, 353, and all later models, number is stamped on top of outside surface of right spring pad on left hand steering cars. On right hand steering cars, number is stamped on left spring pad.
REAR AXLE UNIT NUMBER	On right surface of axle housing just to the right of the cover plate (scrape off enamel to read). No number used on "D" series.
STEERING GEAR UNIT NUMBER	Steering gear housing next to the grease plug. No number used on "D" series.
GENERATOR UNIT NUMBER	Generator housing.
STARTING MOTOR UNIT NUMBER	Right hand side of starter, just below the switch.

Ordering by Telegram

The General Motors Corporation telegraphic code may be used in ordering parts by telegram or in making telegraphic inquiries concerning orders and shipments. This code is simple and extensive in scope, so that telegrams may be coded clearly at a great saving in expense.

The numerical code is based upon the name "GM Products," as follows:

GM PRODUCTS
1 2 3 4 5 6 7 8 9 0

The telegraph rate for code messages counts one word for every five letters or fraction thereof. For instance, the number 68021 is coded as DCSMG which contains five letters and is counted as one word; whereas the number 112458 is coded as GGMROC which contains more than five letters and is rated as two words.

The following supplementary code symbols render this code still more useful and less subject to error in decoding.

E = decimal point (.)
Z = uncoded prefix
Y = dash (—)

Insertion of the letter E into a code number indicates a decimal point; for example, the code word DCEMO signifies 68.25.

Insertion of the letter Z into a code word indicates that the letter or letters following the Z are not coded but are themselves the letters it is desired to transmit. An example of this is the code word DUDEM which is translated 676M, and ZGROSS which means GROSS (not 14500).

The use of the letter Y for a dash (—) is self-explanatory, as this letter has no other significance. This letter is particularly convenient in coding right and left-hand part numbers when both are to be ordered and the only difference is in the last figure. Thus, the code word PGGOMYP would mean 311512-3.

PHRASE CODE

The commonly used phrases are listed below and are numbered consecutively with three digits beginning with 101. Any phrase is coded by using the letters XL before the three code letters which signify the phrase number. For instance, the message "We acknowledge your order No. 658952" is coded "XLPPD DOCTOM."

It is very important to use the letters XL as a phrase prefix, to indicate that the three letters immediately following signify a phrase and not merely numbers.

Returning Parts

Parts shipped on orders are not returnable without factory's permission, except in case of incorrect filling of the order due to factory error. Provisions for the return of surplus and inactive parts from distributors' and dealers' stock are given in the Parts and Accessory Merchandising Manual and in the Cadillac Service Manual. Parts from stock should be returned only when authorized in accordance with these provisions.

Under no circumstances will the factory authorize the return of special material which is not regularly carried in stock, or is fabricated to order.

Provision covering the return of parts replaced under the warranty are given in Chapter II of the Cadillac Service Manual.
